Farm Learning Center Display

We will display our best models, conduct glider build/fly contests for kids, and demonstrate park flying using electric flying machines. All flight demonstrations at the Farm Learning Center will use SPREAD SPECTRUM technology. Club members who bring demonstration models for display at the Learning Center will leave their transmitters at home, as these are for static display only. Members may fly at the Skyhawk field using Spread Spectrum and available low band frequency pins. Nobody flies low band at the Farm Learning Center.

We will also set up a “build one, fly one , get one free” program for the entertainment of kids. They will use the time honored method of building models out of paper plates. Gliders thus built will be entered into beauty and distance flying contests. Winners will receive an upscale Styrofoam glider, all other entrants will receive a toss up glider as a consolation prize. Demonstration electric flying will be discontinued during kids glider flying competitions. All club members are encouraged to visit the Wolcott Mill Farm Learning Center.

Don Wert will provide coffee and donuts for club members and their guests.
All Club members are encouraged to drop in and help with this vital program.
